DEPARTMENT OF REGULATORY AND ECONOMIC RESOURCES (RER) BOARD AND CODE ADMINISTRATION DIVISION

NOTICE OF ACCEPTANCE (NOA)

DURO-LAST Roofing, Inc. 525 Morley Drive Saginaw, MI 48601

SCOPE:

This NOA is being issued under the applicable rules and regulations governing the use of construction materials. The documentation submitted has been reviewed and accepted by Miami-Dade County RER - Product Control Section to be used in Miami Dade County and other areas where allowed by the Authority Having Jurisdiction (AHJ).

This NOA shall not be valid after the expiration date stated below. The Miami-Dade County Product Control Section (In Miami Dade County) and/or the AHJ (in areas other than Miami Dade County) reserve the right to have this product or material tested for quality assurance purposes. If this product or material fails to perform in the accepted manner, the manufacturer will incur the expense of such testing and the AHJ may immediately revoke, modify, or suspend the use of such product or material within their jurisdiction. RER reserves the right to revoke this acceptance, if it is determined by Miami-Dade County Product Control Section that this product or material fails to meet the requirements of the applicable building code.

This product is approved as described herein, and has been designed to comply with the Florida Building Code including the High Velocity Hurricane Zone of the Florida Building Code.

DESCRIPTION: DURO-LAST Single Ply PVC Roof Systems over Lightweight Concrete Decks.

LABELING: Each unit shall bear a permanent label with the manufacturer's name or logo, city, state and following statement: "Miami-Dade County Product Control Approved", unless otherwise noted herein.

RENEWAL of this NOA shall be considered after a renewal application has been filed and there has been no change in the applicable building code negatively affecting the performance of this product.

TERMINATION of this NOA will occur after the expiration date or if there has been a revision or change in the materials, use, and/or manufacture of the product or process. Misuse of this NOA as an endorsement of any product, for sales, advertising or any other purposes shall automatically terminate this NOA. Failure to comply with any section of this NOA shall be cause for termination and removal of NOA.

ADVERTISEMENT: The NOA number preceded by the words Miami-Dade County, Florida, and followed by the expiration date may be displayed in advertising literature. If any portion of the NOA is displayed, then it shall be done in its entirety.

INSPECTION: A copy of this entire NOA shall be provided to the user by the manufacturer or its distributors and shall be available for inspection at the job site at the request of the Building Official.

This NOA renews and revises NOA No. 14-0325.10 and consists of pages 1 through 25. The submitted documentation was reviewed by Jorge L. Acebo.

APPROVED ASSEMBLIES:

Membrane Type: Single Ply, PVC

Deck Type 4I: Lightweight Concrete Decks, Insulated

Deck Description: Minimum 300 psi compressive strength, minimum 3" thick, minimum 39 pcf wet

cast denstiy Mearlcrete Lightweight Insulation Concrete cast over concrete.

Optional minimum 1" EPS board encapsulated within lightweight concrete.

System Type A(1): All Layers of Insulation adhered with approved adhesive; membrane fully adhered

to insulation.

Deck: Structural Concrete

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Deck Type 4: Lightweight Concrete Decks, Non-Insulated

Deck Description: Elastizell cellular lightweight concrete cast with Zell-Fibers in the mix, wet cast

density of 46-50 pcf, minimum 354 psi compressive strength. Slurry coat, followed by 1" thick EPS Holey Board placed into the wet concrete, followed by

a minimum 2" thick top coat of Elastizell cellular lightweight concrete.

System Type E(1): Anchor sheet mechanically fastened to LWC deck subsequent membrane

adhered.

Deck: 22 ga, type B, Grade 40, vented steel deck attached to supports at 7 ft. spans

using ITW Buildex Traxx/5 fastners spaced 6" o.c. (each flue). Side laps

attached with Buildex Traxx/1 fasteners spaced 20" o.c.

This Tested Assembly has been analyzed for allowable deck stress. See

evidence submitted table

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Anchor Sheet: JM PermaPly 28 or GAFGLAS #75 base sheet mechanically fastened to the deck

as described below:

Fastening: Anchor sheet attached to deck with Trufast Twin Loc-Nail Assembled Fastener

spacing of 7.5" o.c. at the 3" side laps and 7.5" o.c. in two equally spaced

staggered center rows.

Membrane: Duro-Fleece Plus membrane fully adhered with Duro-Fleece CR-20 Adhesive

applied using a splatter pattern at a rate of 7 lbs./square. Laps are sealed with a

minimum 1.5" wide heat weld.

Or

Duro-Last membrane or Duro-Tuff membrane fully adhered with Duro-Last SB IV applied at a rate of 60 ft²/gal. applied at a minimum rate of 60 ft²/gal. (apply

120 ft²/gal. to both the membrane and substrate). Laps are sealed with a

minimum of 1.5" wide heat weld.

Pressure: -82.5 psf. (See General Limitation #9)

MIAMI-DADE COUNTY
APPROVED

NOA No.: 17-0202.05 Expiration Date: 08/22/22 Approval Date: 08/24/17 Page 12 of 25

Lightweight Concrete Decks, Non-Insulated **Deck Type 4:**

Minimum 300 psi compressive strength with minimum 45.6 pcf wet cast density; **Deck Description:**

> 0.5" thick slurry of Celcore MF Cellular concrete with Celcore HS Rheology Modifying Admixture is poured over the concrete deck. Min 1" thick Insulfoam Holey Board is placed into the wet concrete, followed by a minimum 2" thick top coat of Celcore MF Cellular Concrete with Celcore HS Rheology Modifying Admixture. After allowing to cure, Celcore PVA Curing Compound is spray

applied at a minimum rate of 0.33 gal./sq.

System Type F(4): Membrane fully adhered to LWC deck.

Deck: Structural Concrete

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Membrane: Duro-Fleece Plus membrane (min. 0.057") fully adhered with Duro-Fleece CR 20

> Adhesive aplied in continuous 1 in. wide ribbons spaced 4 in. o.c. allowed to expand to full coverage prior to applying the membrane. Laps are sealed with a

minimum 1.5" wide heat weld.

Or

One ply of Duro-Last membrane or Duro-Tuff fully adhere with Duro-Last SB IV Adhesive applied at a minimum rate of 60 ft²/gal. (apply 120 ft²/gal. to both the membrane and substrate). Laps are sealed with a minimum of 1.5" wide heat

weld.

Maximum Design

Pressure: -232.5 psf. (See General Limitation #9)

Page 13 of 25

Single Ply, PVC **Membrane Type:**

Lightweight Concrete Decks, Non-Insulated **Deck Type 4:**

Minimum 343 psi; 1/8" thick slurry of Celcore MF Cellular concrete with Celcore **Deck Description:**

> HS Rheology Modifying Admixture is poured over the steel deck. Min 1" thick EPS is placed into the wet concrete, followed by a minimum 2" thick top coat of Celcore MF Cellular Concrete with Celcore HS Rheology Modifying Admixture. After allowing to cure, Celcore PVA Curing Compound is spray applied at a

minimum rate of 300 ft²/gal.

Membrane adhered to LWC deck. System Type F(5):

Deck: 22 ga, type B, Grade 33, vented steel deck attached to supports at 5 ft. spans using

5/8" puddle welds (each flute). Side laps attached with #1/4 = 14 x 7/8" HWH SD

fasteners with ½" washers spaced 15" o.c.

Structual Concrete

This Tested Assembly has been analyzed for allowable deck stress. See

evidence submitted table.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Membrane: One ply of Duro-Last membrane, Duro-Tuff membrane or Duro-Last EV

> membrane fully adhered with Duro-Last WB II Adhesive applied at a minimum rate of 140 ft²/gal. to substrate only. Laps are sealed with a minimum of 1.5"

wide heat weld.

Or

One ply of Duro-Fleece membrane or Duro-Fleece Plus membrane fully adhered with Duro-Last WB II Adhesive applied at a minimum rate of 100 ft²/gal.

to substrate only. Laps are sealed with a minimum 1.5" wide heat weld.

Or

One ply of Duro-Last membrane, Duro-Last Duro-Tuff or Duro-Last EV

Membrane fully adhere with Duro-Last SB IV Adhesive applied at a minimum rate of 60 ft²/gal. (apply 120 ft²/gal. to both the membrane and substrate). Laps are

sealed with a minimum of 1.5" wide heat weld.

Or

One ply of Duro-Fleece membrane or Duro-Fleece Plus membrane adhered with Duro-Fleece CR-20 Membrane Adhesive applied in a splatter pattern applied at a Rate of 8 lbs./100 ft². Laps are sealed with a minimum of 1.5" wide heat weld.

Page 24 of 25

LIGHTWEIGHT INSULATING CONCRETE SYSTEM LIMITATIONS:

- 1. If mechanical attachment to the structural deck through the lightweight insulating concrete is proposed, a field withdrawal resistance testing shall be performed to determine equivalent or enhanced fastener patterns and density. All testing and fastening design shall be in compliance with Testing Application Standard TAS 105 and Roofing Application Standard RAS 117 and/or RAS 137, calculations shall be signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant.
- 2. For steel deck application where specific deck construction is not referenced: The deck shall be a minimum 22 gage attached with 5/8" puddle welds with weld washers at every flute with maximum deck spans of 5 ft. o.c.
- 3. For Systems where specific lightweight insulating concrete si referenced consult current lightweight insulating concrete NOA for specific deck construction and limitations. For systems where specific lightweight insulating concrete is not referenced, the minimum design mix shall be a minimum of 300 psi.

GENERAL LIMITATIONS:

- 1. Fire classification is not part of this acceptance, refer to a current Approved Roofing Materials Directory for fire ratings of this product.
- 2. Insulation may be installed in multiple layers. The first layer shall be attached in compliance with Product Control Approval guidelines. All other layers shall be adhered in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq., or mechanically attached using the fastening pattern of the top layer
- 3. All standard panel sizes are acceptable for mechanical attachment. When applied in approved asphalt, panel size shall be 4' x 4' maximum.
- 4. An overlay and/or recovery board insulation panel is required on all applications over closed cell foam insulations when the base sheet is fully mopped. If no recovery board is used the base sheet shall be applied using spot mopping with approved asphalt, 12" diameter circles, 24" o.c.; or strip mopped 8" ribbons in three rows, one at each sidelap and one down the center of the sheet allowing a continuous area of ventilation. Encircling of the strips is not acceptable. A 6" break shall be placed every 12' in each ribbon to allow cross ventilation. Asphalt application of either system shall be at a minimum rate of 12 lbs./sq.

Note: Spot attached systems shall be limited to a maximum design pressure of -45 psf.

- 5. Fastener spacing for insulation attachment is based on a Minimum Characteristic Force (F') value of 275 lbf., as tested in compliance with Testing Application Standard TAS 105. If the fastener value, as field-tested, are below 275 lbf. insulation attachment shall not be acceptable.
- 6. Fastener spacing for mechanical attachment of anchor/base sheet or membrane attachment is based on a minimum fastener resistance value in conjunction with the maximum design value listed within a specific system. Should the fastener resistance be less than that required, as determined by the Building Official, a revised fastener spacing, prepared, signed and sealed by a Florida Registered Engineer, Architect, or Registered Roof Consultant may be submitted. Said revised fastener spacing shall utilize the withdrawal resistance value taken from Testing Application Standards TAS 105 and calculations in compliance with Roofing Application Standard RAS 117.
- 7. Perimeter and corner areas shall comply with the enhanced uplift pressure requirements of these areas. Fastener densities shall be increased for both insulation and base sheet as calculated in compliance with Roofing Application Standard RAS 117 and/or RAS 137. Calculations prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant (When this limitation is specifically referred within this NOA, General Limitation #9 will not be applicable.)
- 8. All attachment and sizing of perimeter nailers, metal profile, and/or flashing termination designs shall conform with Roofing Application Standard RAS 111 and applicable wind load requirements.
- 9. The maximum designed pressure limitation listed shall be applicable to all roof pressure zones (i.e. field, perimeters, and corners). Neither rational analysis, nor extrapolation shall be permitted for enhanced fastening at enhanced pressure zones (i.e. perimeters, extended corners and corners). (When this limitation is specifically referred within this NOA, General Limitation #7 will not be applicable.)
- 10. All products listed herein shall have a quality assurance audit in accordance with the Florida Building Code and Rule 61G20-3 of the Florida Administrative Code.

END OF THIS ACCEPTANCE

NOA No.: 17-0202.05 Expiration Date: 08/22/22 Approval Date: 08/24/17 Page 25 of 25
