

Note 1: Target patch must extend beyond drain sump to eliminate any hot-air welding within sump. If no sump is present, target patch must extend beyond drain assembly a minimum of 12 inches in all directions. Target patch must be same mil thickness as Duro-Fleece membrane.

Note 2: Duro-Last membrane must extend beyond the inside of the clamping ring. The hole in the membrane must be larger than the drain pipe diameter.

Note 3: The designer should consider insulating the drain components below the deck to prevent potential condensation.

Note 4: Refer to specifications for vapor barrier, insulation and cover board requirements.
