

POLYESTER REINFORCEMENT FABRIC

DESCRIPTION:

Polyester Reinforcement Fabric is a woven 100-percent polyester that strengthens seams, transitions and flashings within Duro-Shield™ roof coating systems.

ORDERING:

Polyester Reinforcement Fabric may be ordered individually in the following size.

- 4-inch x 100-foot roll (Item #41230)

STORAGE AND HANDLING

Keep product clean and dry until ready to install.

INSTALLATION:

1. Limitations
 - a. Only apply at temperature limitations and weather conditions of coating being applied. Refer to the Duro-Shield roof coating installation guides for complete instructions.
2. While the first layer of coating is still wet, roll Polyester Reinforcement Fabric into coating. Ensure that the fabric is aligned evenly over each seam.
3. Use a brush or roller (1-inch nap, min.) to apply pressure to the fabric and embed it into the coating. Allow for the first layer of coating to dry completely.
4. Install second layer of coating directly over the fabric and ensure the proper dry mil thickness of coating will be achieved.
